

An ImmutableDefinition may contain properties such as a national course code, e.g. "B1000-Psych", whereas the mutable definition(s) may include variable properties such as number of external classes that students can select and from which schools they may be taken. VariationRules (a.k.a. policies) constrain what properties can vary and what bounds they can operate within.

Evaluation ensures that the properties of the UnitOfLearning are equal to those of the MutableDefinition of the qualification whose contract the UnitOfLearning fulfills

UnitOfLearning is generalized from any delivery of teaching and learning which is time-bounded and has participants
